Crypto-assets (CA) such as Bitcoin are digital units that can be used as a medium of payment for the exchange of goods and services, as a store of value, and as a unit of account (FATF, 2015). These assets can be stored on computer devices and transferred by the internet on a global scale whether this is in a decentralized fashion (person to person) or with the support of specialized intermediaries who offer a wide range of services such as currency exchange houses, custody and trading of CA as well as the issuing and trading of financial derivatives based on them, etc.
