Deposit Insurance without Commitment: Wall St. vs. Main St.

This paper studies the provision of deposit insurance without commitment. We ask whether a government has an ex post incentive to provide deposit insurance in the face of a bank-run. We find that deposit insurance will not be provided if it requires a (socially) undesirable redistribution of consumption or its financing through taxes is too costly. Else, the insurance gains to deposit insurance will be realized even without a government commitment to its provision.
