Financial Flows for the First Quarter of 2025

1. By Institutional Sector

According to the Financial Accounts calculated by *Banco de la República* (the Central Bank of Colombia), in the first quarter of 2025, the current account deficit of the Colombian economy reached 1.7% of quarterly Gross Domestic Product (GDP), compared to 1.4% in the same period of 2024. This is mainly explained by the deficits of non-financial corporations (5.4%) and financial corporations (1.3%). The institutional sectors that offset said deficit were households and the General Government, with surpluses of 2.8% and 2.3%, respectively.

During the first quarter of 2025, the economy's consolidated external financing needs increased by 0.4 percentage points (pp), as reflected in the internal and external financing flows across institutional sectors. This increase in the economy's financing was explained by higher financing needs of non-financial corporations (-2.4 pp) and a reduction in the General Government's financing capacity (-2.0 pp). This was partially offset by an increase in the financial surplus of households (2.8 pp) and a decrease in the financing needs of financial corporations (1.2 pp).

2. By Financial Instrument / Net External Financing

The negative quarterly saving-investment balance of the Colombian economy was covered by net external financing flows equivalent to 1.7% of quarterly GDP. Net inflows of financial resources from the rest of the world were mainly channeled through a net reduction in deposits (F2) abroad of 2.5%, net issuance of debt securities (F3) to the rest of the world of 0.7%, and net acquisition of accounts payable of 0.7%. This was partially offset by net foreign investment by equity and investments fund shares (F5) of 2.3% of quarterly GDP.

Compared to Q1 2024, the increase in external financing inflows of 0.4 pp was mainly explained by a net reduction in deposits (F2) by 2.4 pp, increased investment in debt securities from the rest of the world (F3) by 0.6 pp, and higher capital inflows from loans (F4) by 0.6 pp. This was offset by a higher net outflow of equity and investment fund shares (F5) abroad by 3.2 pp.

Financial Account Balances for the First Quarter of 2025

1. Net Financial Position by Institutional Sector

At the end of the first quarter of 2025, the Colombian economy recorded a net debtor position with the rest of the world equivalent to -53.1% of annual GDP, explained by the net debtor position of non-financial corporations (-85.5%) and the General Government (-38.5%). This was partially offset by the net creditor positions of households (62.0%) and financial corporations (8.7%).

Compared to the first quarter of 2024, there was a 5.5 pp reduction in the external debtor position of the economy, explained by the reduction in the net debtor position of non-financial corporations (10.7 pp). These changes were partially offset by an increase in the net debtor position of the General Government (3.9 pp) and a decrease in the net creditor position of households (1.1 pp).

2. Net External Position by Financial Instrument

At the end of the first quarter of 2025, the net debtor position of the Colombian economy with the rest of the world, equivalent to -53.1%, was mainly represented by equity investments (F5) at -40.1% and loans (F4) at -21.1% of annual GDP. This was partially offset by Colombians' foreign holdings of currency and deposits (F2) and debt securities (F3) at 5.1% and 2.0%, respectively.

Compared to the first quarter of 2024, the reduction in the net debtor position of the economy by 5.5 pp was mainly due to the decrease in the net debtor position through equity investments (F5) by 5.6 pp, along with increased outward investment in debt securities (F3) by 0.5 pp. This variation was partially offset by a higher level of debt through loans (F4) by 0.5 pp.
